Re: Specification Sections
Project No: 2302.01

Gentlemen:

Please note the following information relative to differences in specification numbers for the same specification title:

Several specification sections have had incorrect spec numbers associated with them - the specification title has remained consistent as had the information contained within the section - only the numbers have changed

01574 - Environmental is the same as 01575 - Environmental - the two sections are one and the same despite the change in spec number

02832 - Segmental Concrete Block Retaining Walls is the same as 02830 - Segmental Concrete Block Retaining Walls - the two sections are one and the same despite the difference in spec number

05300 - Steel Deck is the same as 05310 - Steel Deck - the two sections are one and the same despite the difference in spec number

06100 - Rough Carpentry has been included in the specifications from the beginning of bidding period

07270 - Building Insulation is the same as 07210 - Building Insulation and 07840 - Building Insulation - the same information related to building insulation is contained in the spec section titled Building Insulation irrespective of the section number

Added specification sections:

02040 - Shoring and Bracing - added in the revised specs dated August 23, 2010

04400 - Stone Work - added in the revised specs dated August 23, 2010

07412 - Exterior Metal Wall Systems - added in the revised specs dated August 23, 2010

Please review the Table of Contents contained with the specs issued as part of Addendum 1 bearing the date of "August 16, 2010 - **REVISED AUGUST 24, 2010**" for the most recent listing of relevant specification sections
